

3M™ Aircare™ Wall/Floor Mounted Filtration Unit ACU-01 / ACU-02

Care and Maintenance

To maintain protection levels, optimise the effective lifetime of the system and avoid the additional cost of replacement, it is extremely important to carry out regular checks and maintenance on equipment.

Before Use

- Ensure red indicator is not showing
- Check all connections are airtight
- Verify filter bowls are secure and free from collected liquids

Monthly if not in regular use

- General Inspection

Six Monthly

- Change Filter

After Use

- Depressurise unit
- General Inspection
- Cleaning of Stage 1 Filter

After 500 Hours Use

- Replacement of Stage 1 Filter Element
- Replacement of Stage 2 Filter Element (unless otherwise indicated by differential pressure indicator)
- Replacement of Stage 3 Filter Element (or if odour is detected)
- Replacement of Seals (Can be replaced at same time as elements if required)

If the unit is used at a higher temperature (+50°C to +80°C), extra maintenance will be required (see table following), which should be carried out in addition to the usual maintenance schedule. The gauge must be checked, and re-set if necessary, after any exposure to the higher temperature range.

	Replace seals (if not replaced regularly)	Replace unit
Infrequent exposure	2.5 years	5 years
8 hours exposure per day	12 months	2 years
Constant exposure	12 months	

Ordering Consumables, Repair Parts and Accessories
