Photometry

History

More than three decades have passed since the appearance of the first photometer system.

Since that time, Tintometer has become a world-famous name as the manufacturer of photometer systems sold under the brand name of Lovibond®.

Our range of photometer systems extends from the **MD 100*** and **MD 110*** as hand-held models, the multi parameter **MD 200*** as desktop model to the **SpectroDirect** spectrophotometer for laboratories to the spectrophotometer **UV / VIS XD 7500**.

The new **XD 7000** (VIS) and **XD 7500** (UV/VIS) spectrophotometers include all available Lovibond® methods and give the professional user a wide range of options in all areas of water analysis. These instruments also apply to special implementations and demanding applications in research and development, as well as everyday routine lab work.

The multi-functional **PM 6x0** photometer provides the answer to all requirements relating to the analysis of water used in modern swimming pools. They offer a wide variety of pre-programmed methods and are therefore suitable for the demands of modern water analysis.

The **MultiDirect** offers a wide variety of pre-programmed methods and is therefore suitable for the demands of modern water and drinking water analysis.

Representing particularly robust, portable photometers for fast, flexible on-site analysis are the two **MD 600** and **MD 610** instruments. Additionally, the enhanced **MD 640** is optimally suited for tracer measurements in closed water treatment water systems with the added parameters for fluorescein and PTSA.

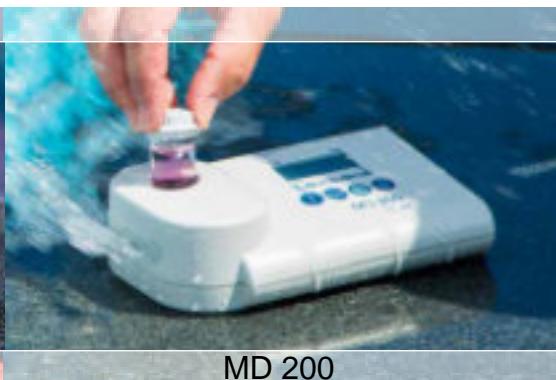

The **MD 110**, **PM 630**, the **MD 610** and the **MD 640** are equipped with state-of-the-art data transmission and feature a **Bluetooth®** interface. Together with the free app **AquaLX®** or the separately ordered **Bluetooth®** dongle (for PC), data exchange is fast and wireless.

The principle of photometry

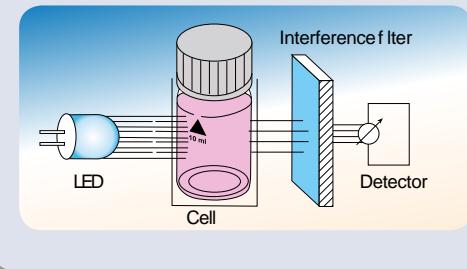

When specific reagents are added, the water sample takes on a degree of coloration that is proportional to the concentration of the parameter being measured. The photometer measures this coloration.

When a light beam passes through the coloured sample, energy with a specific wavelength is absorbed by the test substance. The photometer determines the coloration of the sample by measuring the transmission or absorption of light of this wavelength (in other words, monochromatic light). High-quality interference filters precisely limit the wavelength and are a prerequisite for obtaining high precision measurement results.

The use of such interference filters is one Lovibond® filter photometers to the quality standard. The photometer digitally calculates the required concentration and displays the result.

Photometer MD 100, MD 110 & MD 200

Measurements using high quality interference filters with long-life LEDs as a light source in a transparent sample chamber.

The units provide accurate, reproducible results very quickly. Other major advantages include ease of operation, ergonomic design, compact dimensions and safe handling.

Using an internal ring memory, the last 16 data sets (MD 100, MD 200) and 125 data sets (MD 110) are stored automatically with date, time, parameter and measurement value.

The tests are conducted using either Lovibond® tablet reagents with long-term stability, VARIO powder reagents or liquid reagents.

Bluetooth® is a wireless technology subject to regional approval. The use of the MD 110 with Bluetooth® is currently only permitted within Europe, the USA, Japan and in Canada. The use of the MD 110 will also be possible in other regions in the future. For current regions and further information, visit: bluetooth.lovibond.com. Regions in which the MD 110 with Bluetooth® can currently be used (status: 01/2019): within Europe (according R&TTE Directive 1999/5/EC); USA (according to FCC part 15, comprised in FCCID QOQB113); Canada (comprised in IC 5123A-BGTBLE113), Japan (includes CABID 007-AB0103).

*IP67 certified by IEC 60529

Scroll Memory (SM)

To avoid unnecessary scrolling for the required test method, the instrument memorizes the last method used before switching off the instrument. When the instrument is switched on again, the scroll list comes up with the last used test method first.

Zero Setting (OTZ)

For certain versions of the instrument it is not necessary to zero the instrument each time. The zero setting is held in memory until the instrument is turned off. (One Time Zero - OTZ). The zero setting can be confirmed whenever it is required.

Manufacturers Test Certificate M

Besides the "Certificate of Compliance" the manufacturers test certificates M are available at cost on request. Manufacturers test certificates M are individually supplied per instrument and per method.

The manufacturers test certificate M has to be ordered together with the new instrument and cannot be delivered at a later stage.

N.I.S.T Traceability

The instrument is factory pre-adjusted to international standards. The user can set the instrument in "user calibration mode" with standards traceable to N.I.S.T. adjust.

(N.I.S.T.= National Institute of Standards and Technology)

Verification Standard Kit

The verification standards serve to verify the photometric accuracy and reproducibility of the results at different wavelengths. The absorbance value is stated.

The kit contains one zero standard, six different vials for checking six different wavelengths and allows checking the complete range of MD 100 photometers.

The shelf life of the verification standard kit is two years from the date of production, provided that storage and use are in accordance with the instructions provided.

Measurements are taken in mAbs.

Verification Standard Kit 21 56 70
(MD 100, MD 110 & MD 200)

Data Transfer

The optional available IRIM (infrared interface module) uses modern infrared technology to transmit measurement data from the **MD 100** and **MD 200** photometer to one of 3 optional interfaces.

These interfaces can be used to connect to a PC, a USB printer¹⁾ or alternatively a serial printer²⁾.

The unit is supplied complete with data logging software providing easy and rapid transfer of data to the PC. As an option, the data can be saved as an Excel sheet or a .txt file.

Measurement data can quickly be printed out, using a specified¹⁾ USB or alternatively a printer with a serial plug-in connected to the IRIM.

The **MD 110** photometers have a **Bluetooth®** feature.

Via the **Bluetooth®** interface, the measurement results are transmitted to external instruments for prompt assessment and processing, so that all data can be evaluated and collated directly on site. In order to get the best use out of this, Tintometer offers an app for mobile instruments and PCs software with a dongle.

The free app **AquaLX®** is ideally designed for use in on-site measurements. Compatible with iOS® and Android® TM-based smartphones and tablets, it enables fuss-free data transfer. It maps all measured values as descriptive graphs with minimum and maximum limits and supports export of the data as an Excel®-compatible CSV file.

With the aid of the complimentary **Bluetooth®** dongle, the PC software makes it possible to import data directly from the photometer to the Windows-based PC. As a stationary solution, it facilitates the transfer of data through a fast established, permanent wireless connection. Further processing of the results can be processed both in the software itself and by exporting the data to Excel as a CSV file.

The set of software and **Bluetooth®** dongle is offered as separate accessories under item no.:

For more information please see:
www.bluetooth.lovibond.com

Reference Standard Kit for MD 100, MD 110 and MD 200

The reference standards are designed to check the accuracy and the reliability of the results.

It is not possible to calibrate the photometer with the reference standards.

The shelf life of reference standards is two years from the date of production, provided that storage and use are in accordance with the instructions provided.

Kit Chlorine for instruments 27 56 50 with tablet / liquid reagent 0.2* and 1.0* mg/l

Kit Chlorine for instruments 27 56 55 with tablet / liquid reagent 0.5* and 2.0* mg/l

Thermoreactor RD 125

For the tube test digestion of

COD (150 °C)
TOC (120 °C)
Total Chromium (100 °C)
Total Nitrogen (100 °C)
Total Phosphate (100 °C)

Chemical digestion of samples is required for the photometric determination of COD, TOC, total phosphate and total nitrogen.

The required temperatures and reaction time can be selected by using the membrane keypad of the reactor RD 125. The unit works at three different temperatures (100 / 120 / 150 °C) and three pre-set reaction times (30 / 60 / 120 minutes). When digestion is complete, the reactor automatically switches off and gives a corresponding LED indication with short beep alarm.

The RD 125 reactor is fitted with 24 slots for 16 mm diameter vials.

The voltage can be selected between 230 V and 115 V at the rear of the instrument.

COD Reactor RD 125 Order code: 2 41 89 40

Technical data

Power supply	230 V / 50-60 Hz or 115 V / 50-60 Hz (switchable)
Power	550 W

The right COD tube test for every application

No exposure risk to users due to closed cuvettes

CODdetermination

Cost-effective, easy & safe

Now with additional middle LMRrange!

COD Photometers

With a measuring range from 0 to 15,000 mg/l O₂, the Lovibond® COD photometers are suitable for waste water testing.

Two LEDslight sources with long-term stability (₁ = 610 nm; ₂ = 430 nm, according to ISO 15705:2002), a waterproof sample chamber, a large digital display, and the user-friendly keypad ensure maximum operating reliability and convenience.

Photometers MD 600 & MD 610

Highest/reproducible precision with interference filter

Automatic selection of wavelength

The MD 610 and MD 600 give you mobile instruments in a modern design with the analytical features of laboratory photometers.

All important water analysis parameters from A(aluminium) to Z(inc) are covered by these instruments. Combined with the high precision of Lovibond® reagents, a reliable and quick analysis of water samples is guaranteed. Reagent tablets, powder reagents, liquid reagents, or cuvette tests are used depending on the method.

The highest accuracy is guaranteed by the combination of six long-term stable LEDs as the light source together with interference filters, even when being used in absorption mode. The instruments are designed without moving parts and thus maintenance are free measuring units. While the MD 600 has an infrared interface for data exchange, the MD 610 is equipped with a modern **Bluetooth®** 4.0 interface.

Measurement data can thus easily be transferred from the MD 610 to smartphones or tablets. To support this, the free app AquaLX® is available. For stationary use, the set of PC software and **Bluetooth®** dongle availability as an accessory can alternatively be used for data transfer to a Windows-based PC.

The proven MD 600 photometer uses the classic infrared interface with which data can be transferred by means of the IRiM module to the PC or laptop.

N.I.S.T. Traceability

The instrument is factory pre-adjusted to international standards. The user can set the instrument in "user calibration mode" with standardstraceable to N.I.S.T. adjust.

(N.I.S.T.= National Institute of Standards and Technology)

New methods

Test methods are regularly updated to suit market requirements. You can find software updates for new methods and additional languages on our website at www.lovibond.com. You can program your own methods. This could be done via calibration functions in form of polynomials or by concentration measurements.

Polynomials

Up to 25 fifth order calibration polynomials ($y = A + Bx + Cx^2 + Dx^3 + Ex^4 + Fx^5$) can be stored for custom methods.

Concentration

With this function 2 to 14 standards can be measured. The photometer saves the value pairs obtained as calibration points of a user method (up to 10 methods).

Delivery Content

- Instrument in carrying case
- 4 batteries
- 3 round vials each 24 and 16 mm Ø
- 1 adapter each for 16 mm and 13 mm vials
- Plastic stirring rod 13 cm, Brush 11 cm, screw driver
- Warranty information
- Certificate of Compliance
- Instruction Manual

Interference filter increases reducibility

LEDs have very positive qualities as a light source for photometers:

They achieve a very high intensity in a limited spectral range, which enables low-cost optical set-ups. They are very energy-efficient, which ensures a long operating life when battery operated. They have a long service life and usually last the life of the photometer.

However, the semiconductors inside the LEDs react to temperature fluctuations and are subject to changes during their lifetime. These lead to fluctuations in both the emitted wavelength, the spectral bandwidth and the intensity. While intensity fluctuations are still occurring by zeroing the instrument can compensate before a measurement, a constant measuring wavelength cannot be achieved without the use of high-quality interference filters.

Only when interference filters are used is it possible to ensure that their analytical methods are reproducible.

All Lovibond LED photometers use high-quality interference filters with a half-width of approx. 5 nm.

Verification Standard Kit

The verification standards serve to verify the photometric accuracy and reproducibility of the results at different wavelengths. The absorption value is stated. The kit contains one zero standard, six different vials for checking six different wavelengths and allows checking the complete range of MD 600 and MD 610 photometers. The shelf life of the verification standard kit is two years from the date of production, provided that storage and use are in accordance with the instructions provided. Measurements are taken in mAbs.

Verifications Standard Kit **21 56 40**
(MD 600, MD 610, MD 640)

Bluetooth® is a wireless technology subject to regional approval. The use of the MD 610 with Bluetooth® is currently only permitted within Europe, the USA, Japan and Canada. The use of the MD 610 will also be possible in other regions in the future. For current regions and further information, visit: bluetooth.lovibond.com

Regions in which the MD 610 with Bluetooth® can currently be used (status: 01/2019):

within Europe (according R&TTE Directive 1999/5/EC); USA (according to FCC part 15, comprised in FCC ID QOQBT113); Canada (comprised in IC 5123A-BGTBLE113), Japan (includes CABID 007-AB0103)

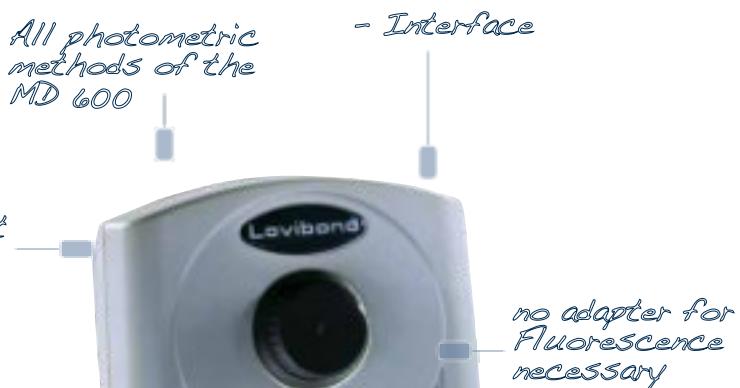

Windows® is a registered trademark of Microsoft Corporation in the United States and other countries.

Photometer & Fluorometer for PTSA in one instrument MD 640

Photometry, trace analysis and tracer detection in one instrument

The Bluetooth® word mark is a registered trademark owned by Bluetooth SIG, Inc. and any use by Lovibond® The Tintometer Group® is under license. iOS® is a registered trademark of Cisco, Inc. and licensed to Apple, Inc. Android™ is a trademark of Google, Inc.

Technical Data

The Lovibond® Photometer MD 640 is an enhanced version of the MD 610 photometer, offering additional fluorescence capability for the determination of PTSA and fluoresceine in water systems.

PTSA(1,3,6,8 pyrenetetrasulfonic acid, sodium salt) and fluoresceine are fluorescent materials that are increasingly being added to specialty water treatment products to enable real time product dose analysis. Both materials are detectable at ppb levels, are non-toxic and chemically stable, all of which make them ideal tracer additives throughout complex water systems. Accurately measuring product dose levels helps the water treatment specialist to control water chemistry; prevent corrosion, scale and biological fouling; increases system efficiency and, ultimately, save energy and costs.

Delivery Content

- Instrument in carrying case
- 4 batteries
- 3 round vials each 24 and 16 mm Ø (black lid)
- 1 adapter each for 16 mm and 13 mm vials
- Plastic stirring rod 13 cm, Brush 11 cm, syringe 5 ml, screw driver
- Warranty information
- Certificate of Compliance
- Instruction Manual

Order codes (without reagents)

MD 640: 21 41 40

Please specify the reagents or parameters required at time of order.

You can find updated information on parameters and measuring ranges at www.lovibond.com

Applications

- Industrial Process Water & Waste Water
- Drinking Water
- Science & Research
- Governmental and Private Laboratories
- Mobile Applications

¹⁾ optional available: connection cable with integrated electronics (RS232 / RJ-45 plug)

* tested with standardsolutions

Bluetooth® is a wireless technology subject to regional approval. The use of the MD 640 with **Bluetooth®** is currently only permitted within Europe, the USA, Japan and Canada. The use of the MD 640 will also be possible in other regions in the future. For current regions and further information, visit: bluetooth.lovibond.com

Regions in which the MD 640 with **Bluetooth®** can currently be used (status: 01/2019):
within Europe (according to R&TTE Directive 1999/5/EC); USA (according to FCC part 15, comprised in FCCID QOQBLE113); Canada (comprised in IC 5123A-BGTBLE113), Japan (includes CAB ID 007-AB0103)

Photometer MultiDirect

The MultiDirect is a contemporary, microprocessor-controlled photometer with ergonomically designed keypad and large-format graphic display. It is equipped with a wide range of pre-programmed methods based on the proven range of Lovibond® tablet reagents, liquid reagents, tube tests and powder reagents (VARIOPowder Packs). Users can also store their own methods.

The MultiDirect has 6 precision interference filters using different wavelengths.

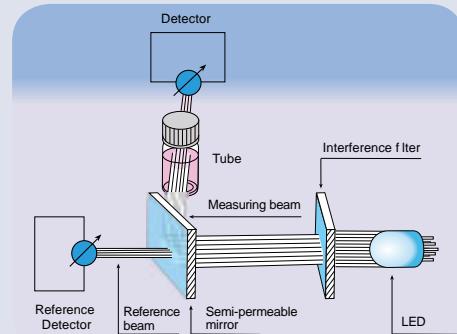

The unique design of the optics allows the automatic selection of the required wavelength without any moving parts. This and the dual beam technology utilizing an internal reference channel, guarantees the highest accuracy.

For portable use, the instrument operates with seven standard rechargeable batteries (supplied). These batteries are available all over the world and are easily changed.

The integrated intelligent charge controller allows simultaneous operation of the unit and battery charging (using the supplied power pack). The MultiDirect also operates without a power pack by using alkaline manganese batteries.

The entire instrument, including sample chamber (the most critical component of any photometer) and battery compartment, is waterproof, ensuring that no water comes in contact with the electronic components.

Dual Beam Technology

The two-beam technology with one internal reference channel guarantees highest accuracy.

N.I.S.T. Traceability

The instrument is factory pre-adjusted to international standards. The user can set the programmed instrument in "user calibration mode" with standards traceable to N.I.S.T. adjust.

(N.I.S.T.= National Institute of Standardsand Technology)

New methods

Testmethods are regularly updated to suit market requirements. You can f nd software updates for new methods and additional languages on our website at www.lovibond.com.

Polynomials

From measured data pairs (concentration Absorption), the user can create a polynomial an obedient polynomial as a calibration function for own methods serves.

A known polynomial may also be used. 25 order polynomials ($y = A+Bx+Cx^2+Dx^3+Ex^4+Fx^5$) can be stored together with user-specif cparameters such as wavelength, measuring range, unit and number of decimals.

Concentration

Alternatively, calibration functions for your own methods can be created by measuring two to fourteen standards. On the basis of the concentrations/absorption pairs obtained, the photometer will calculate a linear interpolation between the measuredpoints. Up to 10 methods can be stored for further sample measurements.

Verification Standard Kit

The verification standards serve to verify the photometric accuracy and reproducibility of the results at the different wavelengths. The absorption value is stated.

The kit contains one zero standard, six different vials for checking six different wavelengths and allows checking the complete range of the MultiDirect photometer.

The shelf life of the verification standard kit is two years from the date of production, provided that storage and use are in accordance with the instructions provided.
Measurements are taken in mAbs.

Verification Standard Kit **21 56 50**
(MultiDirect)

Spectrophotometer SpectroDirect

The SpectroDirect is a solid single-beam spectrophotometer with an excellent price/performance ratio that is specifically designed for water testing.

Optics

The light source is a tungsten halogen lamp. The lamp is switched on only momentarily during the measurement process¹⁾, so there is no need for a warm-up period.

The SpectroDirect is ready to perform a self-test as soon as it is switched on.

The light passes through an entry slot to the monochromator, where it is split into spectral ranges. The monochromator is a holographically produced, transparent grating. The movable mirror ensures that light of the desired wavelength is focused automatically so that it passes through the exit slot, into the sample chamber and therefore through the water sample. The light that is not absorbed by the sample travels to the silicon photodiode detector. This signal is then evaluated by a microprocessor and shown as a result in the display.

Multifunctional sample chamber

Round vials measuring 16 mm and 24 mm in diameter and rectangular cells with pathlengths from 10 to 50 mm may be used without an adapter. Only the 10 mm cell will be fixed by a little holder that must be inserted into the sample chamber.

Operator guidance and functions

The choice of language is prompted in the display and can be switched to German, English, French, Italian, Spanish or Portuguese. When further languages become available, they will be updated via internet.

In addition to the pre-programmed Lovibond® methods, the user can also program 35 own methods (10 user concentration methods and 25 user polynomials). Other functions include the automatic count-down function in various methods, differentiated determination for some methods, absorption / transmission, spectral uptake, kinetics and up to 7 concentrations (linear).

Data transfer

The RS232 interface at the rear allows direct connection and data transfer to a PC or printer with serial interface. Up to 1000 records can be saved with a date, time, running test and code number as well as the measuring range and the method number.

Updates for new methods and additional languages can be found on our website: www.lovibond.com.

Power supply

The required input voltage is 12 V. The SpectroDirect is connected to an external power pack as standard. Battery operation is also possible by using an external energy station (see accessories).

Traceability

The instrument can be checked by the user with a secondary standard filter set (order no.: 711160) with DAkkScalibration certificate. The user can set the instrument in "user calibration mode" with standards traceable to N.I.S.T. adjust.

(N.I.S.T.= National Institute of Standards and Technology)

VIS/ UV-VIS Spectrophotometer XD 7000 / XD 7500

► Please see pages 88 onwards for reagents (order codes)

The Tintometer® Group has a decade-long heritage of standing for in-house produced high quality reagents and instruments. With the XD series, the portfolio is supplemented by an equally first-class spectrophotometer that fulfills even the highest demands in water analysis.

The Lovibond® UV-VIS and VIS spectrophotometers XD 7500 and XD 7000 combine the latest reference beam technology with high user-friendliness and flexibility.

All from one provider

The XD instruments offer over 150 preprogrammed methods, which are based on the proven Lovibond® reagents. The combination of Photometer and Lovibond® reagents gives the user a complete system for immediate work input. There are no issues concerning with the implementation of reagent and instrument. This means that the user not only gets uncomplicated equipment for the working area at all times but also competence in after-sales service.

Quality at an affordable price

The outstanding price/performance ratio of the total systems XD 7000 and XD 7500 is maintained with the diverse range of Lovibond® reagents. So the user can be sure when purchasing the instrument to also have a low-priced solution for consumables in future.

Method selection made simple

The barcoded cuvette tests allow the user an immediate access to the respective method: the insertion of the 16 mm cuvettes into the light-shielded duct is sufficient.

Likewise for any other of the more than 150 parameters, the external barcode reader provides direct method selection. By adopting these barcodes into customer documents, such as work instructions, the correct operation is significantly streamlined.

Global deployment desirable

With its 24-language instrument software, a 27-language user manual and a methodology handbook written in 8 languages, the XD 7000/7500 series qualifies for global applicability.

Through the self-explanatory pictograms the methodology handbook gives the user a quick and reliable overview of the path to the measurement result.

Straightforward user guidance

The bright colour display and the easy-to-use menu navigation allow every user fast access to the instrument and its functions.

Diversity assured

In addition to the pre-installed Lovibond® methods the user also benefits from the various cuvette sizes of 16 and 24 mm round cuvettes, as well as 10, 20 and 50 mm rectangular cuvettes.

These are all automatically recognised, without exception, and the user acquires a wide variety of methods.

The possibility of using a 13 mm cuvette by use of an adapter further enhances the method portfolio.

Always up to date

The latest software updates are always available for registration-free download on our website www.lovibond.com.

This allows users to keep their own XD instrument at the cutting edge with new methods, functions or languages.

Extensive features inclusive

The XD 7000/7500 series offers a comprehensive set of features for versatile use in the analysis of water-based solutions:

- Preprogrammed Lovibond® methods
- The creation of user-defined methods using multiple wavelengths.
- Measurement of transmission and absorption
- Spectral scan
- Kinetic analysis

Well secured

Backup of own data is becoming increasingly important, not just for the maintenance of Good Laboratory Practice (GLP). For this purpose, the user can set up to 3 user levels: Administrator, user and guest (sometimes with password protection).

Guidelines and quality standards that call for such security will be handled in accordance with respective requirements.

Analytical quality assurance

In many application areas, beyond the GLP guidelines, reliable assurance of correct and precise measurement results is both a requirement and a challenge.

The XD 7000 and XD 7500 instruments meet this requirement with 3 selectable functions:

PCheck

The complete photometer is checked by means of the Verification Standard Kit, which can be ordered separately.

MClock

The photometer is checked in conjunction with the method.

The required standards are called application-related ValidCheck® multistandards and ValidCheck® single parameter standard solutions offered.

SClock

The SClock checks whether the photometric determination of other ingredients in the sample have been disturbed.

Each of the mentioned check options includes the capability to define inspection time intervals, indicating verified results and issuing a test report.

Order Code: 71307000

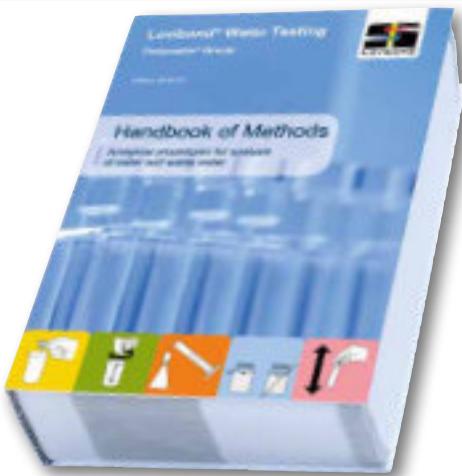

Spectrophotometer XD 7500

Order Code: 71307500

Delivery Content

- Spectrophotometer
- Set of 4 round vials with lid + zero vial XD7x00 (24mm)
- zero via 16 mm for XD 7000 / XD 7500
- 4 batteries AA
- Power supply unit 100 - 240 V / 50-60 Hz / 12 V DC Output
- Power cable
- Quickstart-Guide in 27 languages
- Full User-Manual in 8 languages (digital)
- Handbook of Methods (digital)
- Calibration record in shipping box

Technical data	XD 7000	XD 7500
Wavelength range	320 – 1100 nm (scan range)	190 – 1100 nm (scan range)
Light source	Tungsten-halogen-lamp	Xenon flash lamp (500 million flashes possible)
Optical system	grid monochromator with reference beam and beam splitter after exit slit	
Measurement	grid monochromator with reference beam and beam splitter after exit slit	
Suitable Vials	round: 13, 16 and 24 mm, rectangle: 10, 20 and 50 mm	
Automatic Tube Recognition	automatic recognition of 16 and 24 mm round tubes, 10, 20, 50 mm rectangular tubes	
Test recognition	via internal or external barcode reader (depending on the method)	
Dimensions (W x H x D)	422 x 195 x 323 mm	
Weight	approx. 4,5 kg	
Power supply	100 – 240 V, 50 / 60 Hz	
Display	7" high contrast colour graphic display	
Protection class	IP30	
Keyboard	membrane keyboard	
Interfaces	1 x ethernet RJ45, 1 x USB A for external memory, keyboard, mouse, barcode-scanner and 1 x USB B for PC and PCL compatible printer	
Spectral scope	4 nm	
Wavelength accuracy	± 1 nm on all Holmium peaks	
Wavelength reproducibility	better than 0,5 nm	
Photometric range	-3,3 - +3,3 Abs	
Photometric resolution	Abs.: 0,001 Transmission: 0,1%	
Photometric accuracy	0,003 Abs below 0,6 Abs / 0,5 % from 0,6 bis 2,0 Abs	
Photometric reproducibility	0,003 Abs below 0,6 Abs / 0,5 % from 0,6 bis 2,0 Abs	
Photometric linearity	<1% up to 2,0 Abs between 340 to 900 nm	
Scattered light at 340 and 408 nm	< 0,1% transmission	< 0,05% transmission
Drift	< 0,005 Abs per hour after 15 minutes heat up time	
Internal storage	approx. 5000 data sets (method, user ID, date, result), auto storage function / manual storage function	
Programmability	up to 100 user programs, 20 user profiles	

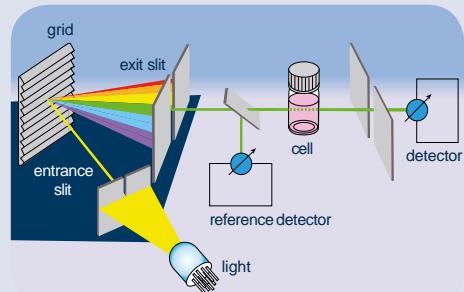

The Handbook of Methods

The 900 pages contain more than 160 Lovibond® test methods. Each method can also be selected directly by the XD instrument via barcode with the scanner. With basic chapters on water analysis, source and literature references, references to standards and explanations for possible errors, it is also a compact reference book for photometry - printed or digital.

The methods manual is currently available in eight languages.

The optical system

Using reference beam technology, the spectrophotometers achieve maximum accuracy in the visual and non-visual wavelength range.

The light source according to the model and consists of a tungsten-halogen lamp in the XD 7000, while the XD 7500 is equipped with a xenon flash lamp.

With an output of up to 500 million flashes, the UV light source is designed to last the life of the instrument and is a cost-effective replaceable part as opposed to the usual deuterium lamps.

By means of a grating monochromator and beam splitter behind the exit slit, the respective required wavelength is precisely demarcated and allows a wavelength accuracy of +/- 1 nm.

The principle in detail

The light emitted by the light source falls through the entrance slit on the monochromator and is deflected by the grating situated towards the exit slit. This mechanism, along with the limitation after the exit slit, enables the selected wavelength to be accurately reproduced.

The semi-transparent mirror deflects the reference beam while allowing the light beam to pass through to the sample in the cuvette.

The photodiodes act as detectors and transmit these signals to the microprocessor. The result is calculated and issued as a value in the display.

ValidCheck WW Effluent Multi-Standard COD/TOC/NO ₃ -N/PO ₄ -P/TP	CSB/COD/ TOC NO ³⁻ -N P(total)	40 mg/l O ₂ 10 mg/l 1 mg/l

ValidCheck Standard solutions

Quality management of analytical methods is a fundamental prerequisite for reliable water analysis. With the new ValidCheck standard solutions, ready-to-use solutions are available to the user. The precisely adjusted concentrations are modified to each particular application case. The dilution is omitted.

With the ValidCheck Multistandards, the user can immediately check all important analysis methods of an application with one product: Anions and metals in the drinking water analysis or in the analysis of the wastewater treatment plant inflow and outflow. In addition, the Multistandards contain a stocking solution, which enables the reliable determination of the influences of the sample matrix on the results.
